DICTIONARY MANAGEMENT SYSTEM

FLOW CHART

DICTIONARY MANAGEMENT SYSTEM

SOFTWARE SPECIFICATION

- OPERATING SYSTEM : Linux / Windows / IOS
- ENVIRONMENT : CentOS

HARDWARE SPECIFICATION

- PROCESSOR : I3 7TH GEN
- RAM : 2 GB RAM
- MONITOR : 15.6" IPS DISPLAY
- HARD DISK : 20 GB

DICTIONARY MANAGEMENT SYSTEM

DESCRIPTION

INTRODUCTION:

A Dictionary Management System is an enterprise resource planning system to help everyone allowing them to view any new or difficult word just by typing it.

DESCRIPTION:

It is a project which aims in developing a computerized system to maintain daily vocabulary needs for everyone. It is having a wide range of people using it and moderators can easily add new words in it. One can understand any new word's meaning just by searching it in dictionary.

PROS:

- It reduces the hassle of books.
- Updating is fast as the system is computerized.
- Can be accessible from any device of any platform as its working on JAVA.
- Searching is simple and fast just enter the correct word.

CONS:

- Software needs to be updated daily.
- Handling such a database may cause slowing of response time in program.

Managing Dictionary

DICTIONARY MANAGEMENT SYSTEM

AIM:

To create a computerised dictionary management system which: -

- **Login Page**
- **Search In Dictionary**
- **Logout**

HTML

CODE:

```

```

SCREENSHOT:

JAVA

CODE:

```
import java.util.*;
class dictionary
{ public static void main(String[] args)
  { Scanner sc = new Scanner(System.in); int a=1,count=0;char b;
    String[] strArray = { "Abandon", " To go away forever",
    "Above", " Higher than", "Baby", " Very young child who cannot walk
yet", "Bad", " Not good; Wrong","Cab"," Place where driver
seats;Taxi","Cable"," A very strong thick rope", "Daily"," Every
```

```

day","Damage", " Harm or injury","Eager"," Waiting very much to do
something", "Earnest", " Serious; Sincere","Zeal", "
Enthusiasm,eagerness,passionate" };
while(a!=2)
{
    count=0;
    System.out.println("### Dictionary Management System
###\n");
    System.out.print(" Enter Word: ");
    String s = sc.nextLine();
    for (int i = 0; i < strArray.length; i++)
    {
        if(s.equals(strArray[i]))
        {
            System.out.println(" Meaning
is:"+strArray[i+1]+"\n"); count=1;
        }
    }
    if(count==0){System.out.println("OOPS!!! Word Not Found!!!");}
    System.out.println("Do you want to continue(Y/N)");
    b= sc.next().charAt(0);
    if(b=='n' || b=='N')
    {
        a=2;
        System.out.println("Logging Out");
    }
}
}
}
}
}

```

OUTPUT:

```

C:\Users\SOURMYA\Desktop>java dictionary
### Dictionary Management System ###

Enter Word: Above
Meaning is: Higher than

Do you want to continue(Y/N)
N
Logging Out

```

```

C:\Users\SOURMYA\Desktop>java dictionary
### Dictionary Management System ###

Enter Word: Bad
Meaning is: Not good; Wrong

Do you want to continue(Y/N)

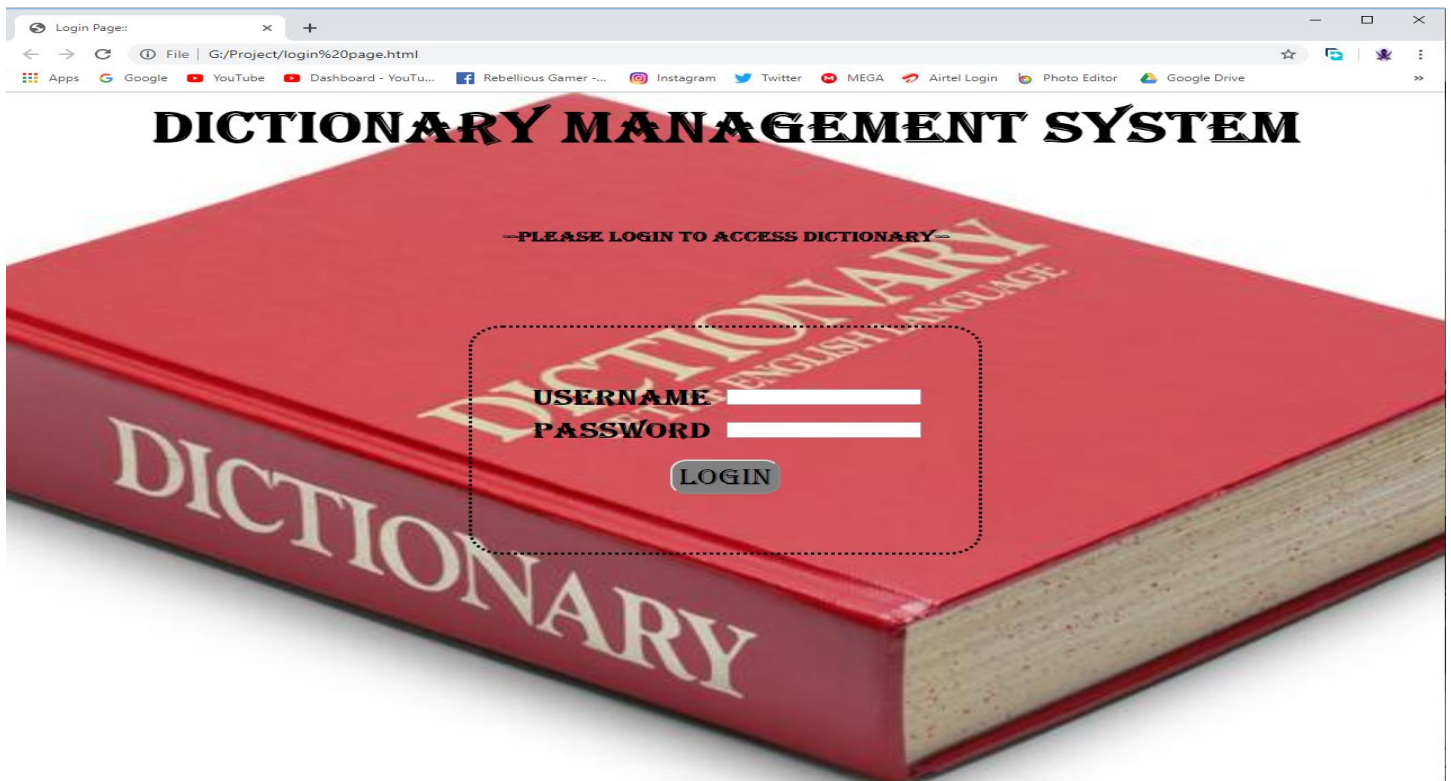

```

EXPLANATION ABOUT PROJECT:

This project basically has 3 modules:

- 1.Login page: - Here a user has to enter his username and password to access dictionary.
- 2.Search Word: - Here user is asked to enter a new word to search the meaning for that.
- 3.Retrieving Meaning: - The program will automatically get the meaning of the word or will just give a message in case the word is unavailable in its data.
- 4.Logout: - It log outs user once user is done with the search.

OUTPUT SCREENSHOTS:

```
C:\Users\SOU MYA\Desktop>java dictionary
### Dictionary Management System ###

Enter Word: Above
Meaning is: Higher than

Do you want to continue(Y/N)
N
Logging Out
```

```
C:\Users\SOU MYA\Desktop>java dictionary
### Dictionary Management System ###

Enter Word: Bad
Meaning is: Not good; Wrong

Do you want to continue(Y/N)
```

CONCLUSION:

1. A better, space efficient and hassle free system to manage dictionary and search meaning of new words.
2. This project provides a computerized version of dictionary management system which will benefit everyone and save them some time from searching the meaning from a book.
